

Bassam Alrifaae appointed to professor at the University of the Bundeswehr Munich

Copyright Universität der Bundeswehr München/Döring

Since 1 March 2024, Dr. Bassam Alrifaae, a former senior researcher and lecturer in the Embedded Software group (Informatik 11), is professor for Control of Autonomous Systems at the University of the Bundeswehr Munich. In Aachen, Prof. Alrifaae was responsible for the group „Cyber-physical Mobility“ and built one of the first scaled test beds for networked cooperating autonomous vehicles (<https://cpm.embedded.rwth-aachen.de/>). His work has been instrumental for the participation of the group in the SPP 1835 “Kooperativ interagierende Automobile”, the SFB Transregio 339 „Digitaler Zwilling Straße“, and the multi-site BMBF projects UNICARagil and AUTOftech.agil. We wish Prof. Alrifaae a smooth start and a lot of success in his new position.
