

engineering certificate for Andreas Derks

Following the tradition of academic graduations, our electronics engineer Andreas Derks has lectured on his final project "construction and monitoring of modular measuring and surveillance systems of individual solar moduls". He passed the subsequent exam successfully. Following traditions, Mr.Derks paraded to the town hall and, in a spontaneous speech, gave the citizens of Aachen an understanding of his project.

We congratulate Mr. Derks to the aquisition of his title: state-certified engineer!
